

FOOD INDUSTRIES ULTIMATE LABELING & PACKAGING SOLUTIONS

www.elkekhiagroup.com

EL KEKHIA
GROUP

El Kekhia Group is a corporation of several companies, each operating within a separate yet complementary industry to provide its services to all its business units. And with a long-standing history in manufacturing and trade, the group is renowned for being Egypt's leading provider of garment retail solutions and feeding industry expert.

In 1992, a fascination with the textile and garment industry lead El Kekhia family to identify a market gap for locally produced garment hangers that could easily replace their imported and expensive counterparts. The journey began at the world's fashion capital, Italy where they made their first purchase of a hanger mold, paving the way to eventually becoming Egypt's leading producers of garment accessories.

Then with just only one injection machine, the year 1994 witnessed the opening of their first factory and the establishment of El Kekhia Plastics. It was only a few years later when plans for expansion lead to a partnership with Mainetti Group - the world's largest producers of garment hangers with a global operation comprising more than 5000 employees in 49 countries.

Today the factory is equipped with over 30 injection machines and exports to an extensive client base around the world. The group's stellar reputation for providing superior quality plastic products and an operation backed by a dedicated team has allowed them to expand to other plastic manufacturing areas and penetrate new markets.

The factory's latest addition includes new thermoforming product categories such as insert trays, clamshell punnets which provide ideal packaging solutions that are both safe for fresh fruits and vegetables.

EL Kekhia Accessories, one of El Kekhia Group companies, is evaluated as a superior one in the fabrication and packaging of labels and stickers field since 1994 in the feeding industry as well as in the garment industry. The company is contemplated as a senior agriculture labels and packaging solutions supplier in the feeding and garments industries for its makers, fabricators, and exporters, still staying in step with environmental demands. El Kekhia Group factories and trade office based in Egypt's Free Zone, located in Nasr City, catering to international clients ensures its customers seamless logistics and hassle-free processes.

Our peculiar location offers many privileges to our customers, like the non-necessity of storage spaces and the ability to weekly-order delivery, as well as affordability and time distribution. It also qualifies El Kekhia to swiftly and effortlessly transmit and market its top-notch services in the Middle East, Africa and the Gulf Region.

AGRICULTURE & FEEDING PACKAGING SOLUTIONS

Our categories include clamshell punnets, stretch sheets, poly bags and bubble wraps and -pads, stickers and labels include various blank materials, all of which adhere to the European Food Safety Authority (EFSA) guidelines to ensure maximum durability and optimum product safety.

Moreover, when working with perishable foods, we understand the importance of smart packaging design in protecting and prolonging the shelf life of fresh fruits and vegetables. We produce all standard sizes in accordance to the packing requirements of fruit and vegetables producers and wholesalers as well as customized designs based on our clients' different needs.

CLAMSHELL PUNNETS

Considering the current supply chains, clamshell punnets are the ideal widely-spread storing method. High-resilience and efficient packing, lid-closing or net wrapping are guaranteed due to the fact that it is made of a hard PET material. Lid heights come in different shapes and sizes to fit all the clamshell punnets which are perfectly used to conserve and package mixed sized fruits and vegetables. In order to meet the producers' and wholesalers' packaging demands, we have the well-known commonly used standard sizes 250g and 500g.

Further, other than being usable in the manual packaging process, our clamshell punnets are conveniently fit to be used in the automatic packagings as well. The PET material used in manufacturing the clamshell punnets and lids assure the extra safety of the products throughout the supply chain.

They are also fitted with ventilation holes permitting a quicker cooling and refined air-circulation to boost the products longevity while on the shelf. The bottoms of the clamshell punnets are designed to accommodate bubble pads to provide extra protection for squishier fruits and vegetables. We work creatively and innovatively on offering refined and modified products to reduce the negative environmental impact and food waste.

El Kekhia company has grown very selective when it comes to its location, which plays an important role in establishing a solid business ground with wholesalers and producers.

Egypt is well-known for occupying a superlative location, thus, El Kekhia's selectivity of its current location efficiently qualifies it to swiftly and effortlessly transmit and market its top-notch products.

QUALITY

Made from PET material, utilizing the best technology in precision cutting and over 20 years of experience in plastics, we guarantee our customers the maximum durability and highest packaging quality.

DESIGN

Our clamshell punnets are designed with ventilation holes to allow continuous airflow in and out of the pack. This not only cools fresh products to give it a longer shelf life but also enables the outflow of ethylene which is considered an aging hormone in plants and accelerates the ripening process.

ENDURANCE AND PROTECTION

Our adherence to EFSA guidelines, use of proper ventilation and durable packaging keep even the softest fruits fresh from farmer to consumer.

OUR PUNNET SPECIFICATIONS (SPECS SHEET)

TRAY LINER

A wide range of shapes, sizes and colours are available upon request. Tray liners are the ideal solution to maintaining the foods' freshness, while simultaneously showing and presenting fruits in an appealing and attractive way.

The tray liner keep them fresh and prevent bruising and crushing during transit, storage and display, and less product wastage.

DIGITAL TEMPERATURE RECORDER

For even more reassurance that perishable foods are stored under the right conditions during transportation, we use the TRC60 single use digital temperature recorder that can record temperatures at 6 minute intervals and up to 60 days.

TRACKING AND TRACING

With the constant concern for food safety and strict safety regulations, more and more companies realize the importance of being able to track their products during all phases of the supply chain. Our system allows our clients to receive realtime information about their products any time they wish.

BAR-CODING

Our wide range of materials, sheets, and roll sizes enables us to provide the perfect barcode labels for any industry. We ensure you that printing the UPC labels will be of the GS1 high quality standards and the barcode scanning ones.

LABEL DISPENSER BRANDING

We offer our clients printed labels that are applied to fresh fruits automatically. Our machines we use are specially designed for the application of labels on fruits and other agricultural products, but also have successfully integrated into the industrial sector to label any product.

DP label dispensers are equipped with latest generation microprocessor, components of high quality and reliability, getting up to speed and accuracy of labeling is not seen. The choice of material makes it light resistant, reducing operator fatigue. Wide range of sizes depending on the type of label are always possible, producing more than 250 labels per minute.

STICKERS & LABELS

Our distinctive collection of stickers and labels include various blank materials, self-adhesive labels, barcode labels, promotional labels, hot-stamp labels, and poly bags for shopping purposes, in addition to any food industry related packaging and much more. We have professional design experts who are willing to blueprint, contrive, and prosper any entailed model and/or design.

A variety of label colours are available up to 7, which come in different sizes and distinct materials, in addition to vibrant hot-stamping on self-adhesive labels. We are mainly specialized in the most advanced agriculture packaging, labels and stickers like label dispensers, tracking and tracing as well as refrigerator containers' digital recorders.

LABEL / MONTH

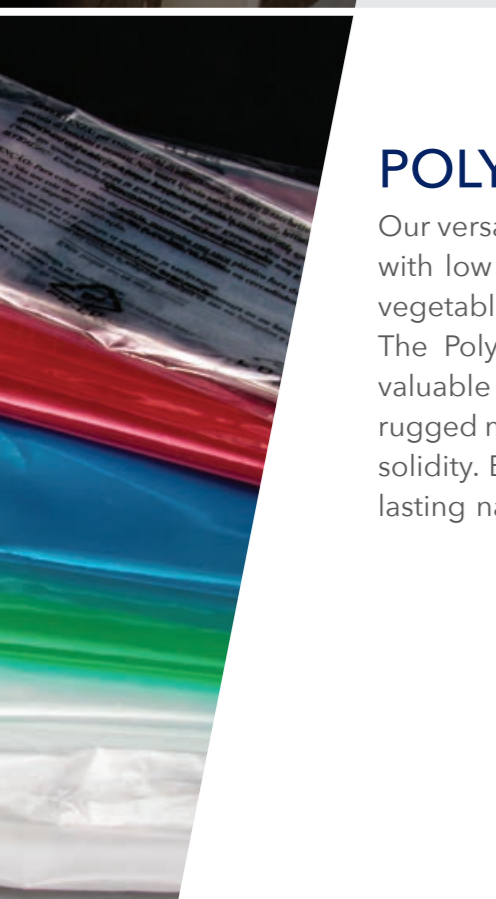

BUBBLE WRAP AND BUBBLE PAD

Lightweight and water resistant bubble wraps provide the best cushioning to protect fragile or breakable items during transportation and storage. The uniformly spaced air bubbles vary in diameter based on the size of the product requiring protection from damage. The larger the item, the bigger the air bubble. Moreover, our trimming machines allow us to quickly produce precut bubble wraps to fit our punnets or any other sizes that can be used on their own, depending on our clients' needs.

STRETCH FILM

We provide cast stretch film which has the dual advantage of high transparency and high puncture resistance making it the ideal packaging solution for fresh produce whether it's used to seal trays or directly wrapped around fresh foods and vegetables. Its flexible mechanism offers two-sided cling, easy stretching.

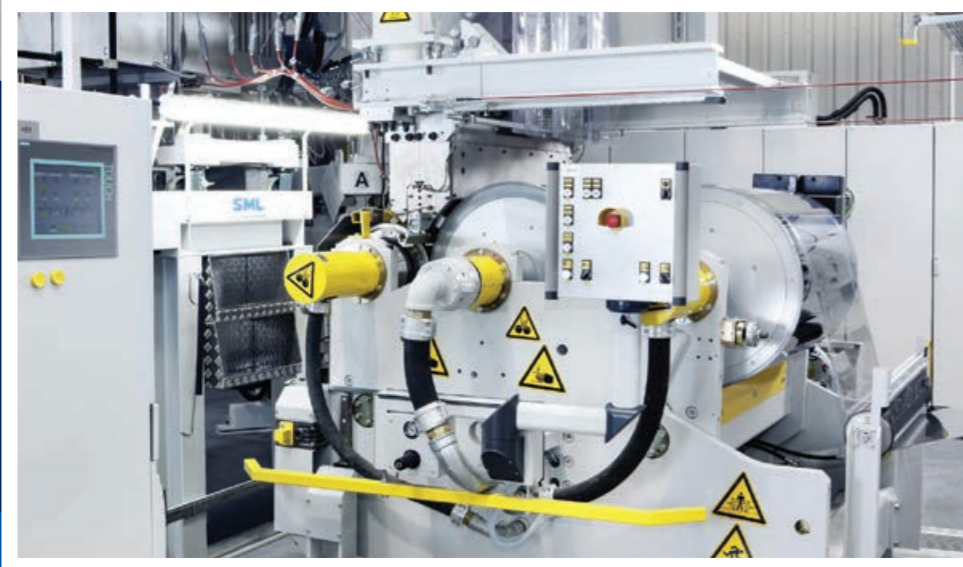

POLY BAGS

Our versatile flexible types of poly bags are made of Polyethylene with low density (LDPE), which is ideal for packaging fruits and vegetables, as well as small non-perishable items. The Polyethylene high density (HDPE) and Polypropylene are valuable materials used as plastic for industries that entail highly rugged materials due to its waterproof nature that will maintain its solidity. Even though its price is a bit higher than paper, its long lasting nature with the item makes it perfect for asset labels.

OUR MACHINES

STATE OF THE ART EXTRUSION LINE
AND THERMOFORMING MACHINES
(PET AND R-PET SHEETS)

We employ state of the art technology to ensure maximum productivity and preciseness products. It specializes in building high performance extrusion equipment, focusing on the development of our production lines for film, sheet and laminates as well as on spinning lines for multifilaments. Also, it proposes various stacking systems which means less production downtime, regardless of the packaging.

OUR HEALTH AND SAFETY PROCEDURES

El Kekhia Group is committed to apply the highest occupational health and safety standards for the protection of property and personnel within the company as well as neighboring companies. Therefore, occupational health and safety procedures are applied by means of setting plans, policy and objectives of the organization for occupational health and safety of the company and so as to comply with legal requirements and OHSAS 18001 obtained by the company, as to comply with the requirements of the Egyptian Code of Civil Defense.

Necessary training courses in the field of occupational health and safety were also obtained at every El Kekhia factory such as (Concepts of occupational health and safety systems, Civil defense, first aids, training of occupational health and safety committee, training safety professionals, whether specialist or technical).

Our group health and safety manual which clearly sets out our safety policies, organizational structure, procedures and conducts a survey of all production processes to identify risks for analysis to reduce their potential occurrence. The company also identifies chemical used and makes a survey thereof, along with a safety sheet for each material used.

Assisted by our internal specialists, all factories have implemented the requirements of the manual and this is regularly audited by our internal audit teams and external companies. We regularly review progress to ensure that we are continually improving

OUR ENVIRONMENTAL PROCEDURES

El Kekhia Group is committed to implementing the highest environmental preservation standards by means of the company's obtaining ISO 14001 certification as well as applying its terms so as to reduce environmental risks. The company's environmental record was prepared and approved.

Training and awareness raising courses have been implemented in order to preserve work environment (energy conservation awareness and methods of safe disposal of wastes of all kinds).

Environmental measures have been taken to determine ratios and their conformity with the legal requirements for the protection of the company's workers (noise, thermal heat and lighting).

The company signed a contract with a specialized firm in order to evacuate medical as well as solid wastes resulting from the production process so as to ensure a safe and healthy work environment free of any environmental risks. The analysis of drinking water has been carried out so as to ensure that water is potable.

Shiller water was analyzed. Environmental risk assessment has been carried out for each process to be analyzed with the aim of reducing their occurrence of CH4. Diesel exhaust emissions were measured through: measurement of the working environment and methane concentration, measurement of welding vapors and measuring lingering soil to protect the environment in general, the working environment as well as workers and neighboring companies in particular.

El Kekhia Group is committed to set plans, objectives and a general policy to achieve the highest energy conservation rates. Damages products are recycled using special machines for this purpose.

All such procedures and elements are conforming to the legal requirements regarding providing a safe and healthy working environment.
